

a Asymmetric F2 spatial risk

b Long-horizon sampled F2 faults

1,000,000 s; 1,888 sampled faults; conditional expectation 1880.6; bin risk-rate Pearson $r=0.822$.
Panel b uses raw 2.5×2.5 degree eligible-bin counts with the linear integer ticks spanning 0--13.
Counts 8--13 use the darkest 20% of the blue ramp. Circles retain the individual event locations.
